Summary

Frontend Developer with 10+ years of experience in the Node.js ecosystem, focused on React and Vue applications, internal tooling, and automation. Proposed and led a full migration of 200+ sites to a custom monorepo that scaled to 500+. Comfortable owning fullstack tasks when needed – including lightweight services, serverless functions, CI/CD pipelines, and API integration – while staying frontend-first in role and specialization.

Skills

- Frontend: JavaScript / TypeScript, React (Redux, Hooks, Context API), Vue (Pinia)
- Node.js: Hono, Cloudflare Workers, Supabase Edge Functions, automation scripting
- Data: MongoDB, PostgreSQL, SQLite, Supabase
- HTML / Templates: Nunjucks, Twig
- CSS: SCSS, LESS, BEM, mobile-first; familiar with Tailwind
- Testing: CodeceptJS (Playwright), Vitest
- CI/CD / Delivery: Azure DevOps, GitHub Actions, Docker, Vite
- Familiar with: Next.js, React Query, Google Cloud, Figma (design handoff)

Experience

LeadsMarket

Frontend Developer

September 2017 – January 2026

- Proposed and led a full migration of 200+ sites from isolated repos to a unified monorepo (Gulp, Nunjucks, SCSS, Babel) – enabling content inheritance, shared components, and faster delivery. The monorepo then scaled from 200 to 500+ sites over the following years.
- Cut monorepo build time from 40 minutes to ~40 seconds by authoring a Node.js script that detected and rebuilt only changed sites using pipeline metadata.
- Built a React/Redux internal admin panel to manage and query the full 500+ site portfolio, with advanced filtering, sorting, and a custom hotkey system – adopted company-wide by managers and developers.
- Designed a serverless backend for the admin panel using Supabase Edge Functions (Hono), replacing earlier iterations with Node.js/Express + MongoDB/PostgreSQL, iterated toward a cost-free, scalable solution.
- Built a Vue.js dashboard to visualize e2e test results, reducing QA investigation time significantly.
- Supported QA team with CodeceptJS (Playwright) adoption: mentored on implementation and built custom helpers for complex scenarios including network payload validation.
- Managed CI/CD pipelines in Azure DevOps including shared quality gates and pre-commit automation across all projects.

FORFORCE / Digital Production

Frontend Developer

March 2016 – August 2017

- Developed and maintained client websites as part of a team, gaining experience in collaborative workflows, code review, and JS fundamentals.

Pixwhite

Junior Frontend Developer

May 2015 – February 2016

- Built websites end-to-end for a design agency handling freelance orders, covering HTML/CSS markup, layout, and cross-browser compatibility.

Pet Projects

Cloudflare Workers

- **Telegram channel automation**

Built an automation pipeline using Apple Shortcuts + Cloudflare Worker: a shortcut sends an IMDB URL to the Worker, which stores it in KV storage and publishes to a Telegram channel via a daily cron trigger.

- **Bank receipt organizer**

Worker receives PDF receipt content via Apple Shortcuts, extracts the utility service name and address using predefined rules, and returns structured data back to the shortcut – which automatically renames the file and saves it to the correct directory (e.g. Services/Address/Year/Month/Service name).

Education

Dnipro National University of Railway Transport

Specialist degree, Automation, Telemechanics and Communications

2009 – 2014
